(TS//SI//NF) Conclusion

What to Remember

- PRISM is one of the most valuable, unique, and productive accesses for NSA – don't miss out on your targets.
- Recommend tasking ***all*** DNI and DNR selectors to FAA 702 if they meet the criteria. Your target's communications could be flowing through SSO's accesses which **only FAA can access**. Communications paths constantly change.
- Recommend **using Rules-Based-Tasking in UTT** to ensure that both PRISM and passive/upstream SSO FAA accesses are given the selectors.
- Some Product Lines do not use PRISM and other SSO accesses optimally. They are **missing unique collection** on their targets.
- FAA 702 collection = PRISM program providers + FAA Upstream SSO programs with access to **thousands** of non-PRISM internet domains, DNR collection, cyber signatures and I.P. addresses.
