```
$ENV{HTTPS_CERT_FILE} = 'PEM_file_containing_certificate';
$ENV{HTTPS_KEY_FILE} = 'PEM_file_containing_private_key';

# Set base URL for web service
my $BASE_URL = 'https://ncmd-blackbeach.ncmd.nsa.ic.gov:8451/TargetNetworkService/webresources/rest/csv';

# Configure user agent
my $ua = LWP::UserAgent->new;
$ua->timeout(90);

# Retrieve from TNS
my $request = GET "$BASE_URL";
my $response = $ua->request($request);
if ($response->is_success) {
    print $response->content;
}
else
{
    die "Call to " . $request->uri . " failed : " . $response->status_line;
}
```

(U) Sample wget Call [edit]

(U) Assuming that you have a PEM file containing both your user/server certificate and private key:

```
wget --certificate=server.pem --private-key=server.pem --no-check-certificate 'https://ncmd-blackbeach.ncmd.nsa.ic.gov:8451/TargetNetworkService/webresources/rest/csv'
```
